Lecture Notes

Combinatorics

Fall 2026

These notes are the main guide through the course. They are organized by unit and mathematical topic rather than by the particular class meeting in which a topic appeared. Draft and future units remain in the instructor's private course design collection until they are ready for publication.

Course units

- Unit I: enumeration and inclusion-exclusion.
- Unit II: generating-function foundations.
- Unit III: recurrence models.
- Later units: further topics as announced on the calendar.
